INDUSTRIAL AIR CURTAIN

Door Guard Professional Range

The Flexiheat range of industrial air curtains are designed for protection of industrial buildings from the loss of heat energy through open doors. Air flow range up to 7.5m thanks to high efficiency fans and modular construction

ADVANTAGES

- Air throw up to 7.5m
- Modular system based on length of air curtains 1.5m and 2m
- Vertical or horizontal assembly
- ACTIVE PROTECTION System

ACTIVE PROTECTION SYSTEM

ACTIVE PROTECTION system improves effectivity of air barrier which protects entrance doors.

ACTIVE PROTECTION SYSTEM helps to save energy supplied for heating of air curtains. Main principle is to install an air curtain with water heater at the bottom and an ambient air curtain at the top. The warm air leaving bottom curtain will move upwards and will create temperature comfort for users. In this case only the bottom air curtain is supplied with heating, thus resulting in substantial savings on operating costs.

AUTOMATIC CONTROL

Doorstop

- Starts operation of curtain when door opens

SPEEDER

- Air exhaust regulation

CONTROL BOX

- Complete electrical connection box
